

AGOURA ROAD WIDENING PROJECT

AGOURA ROAD Widening Project

To meet future planned growth, the City has initiated a project to widen a 2.2 mile stretch of Agoura Road from two to four lanes between the City's westerly limits and Kanan Road. When completed, the project will improve traffic flow, create a consistent design that is compatible with the existing roadway, and improve the roadway's function to serve as an emergency alternative to the U.S. Highway 101. This is a Measure R project fully funded by Metro.

Project Highlights

- Widening Agoura Road from two to four lanes.
- Construction of landscaped medians, sidewalks, a pedestrian-only bridge over Medea Creek, and dedicated bike lanes in both directions.
- Installation of decorative street lights along the improved roadway.
- Undergrounding the electrical power lines.

Project Benefits

- Improving local traffic flow.
- Providing an emergency bypass for the U.S. Highway 101.
- Increasing safety for pedestrians, cyclists and recreationists.
- Enhancing the roadway's visual appearance.
