

# A FED COYOTE IS A DEAD COYOTE.

---

**Please do not feed wild animals.**

Coyotes that are fed in residential neighborhoods can lose their fear of people which can lead to potentially dangerous human - coyote encounters.

---

## **Q. If a coyote is seen during the day are they rabid?**

Coyotes primarily travel between dusk and dawn but during the spring and summer, when food needs are higher, they will move around during the daytime. This does not mean that they are rabid.

## **Q. How can I prevent conflicts with coyotes and other wildlife?**

- Avoid any contact with wildlife
- Keep trash securely covered or indoors
- Feed pets inside or supervise outdoor feedings/keep area clean
- Keep cats/dogs indoors and supervise them while outdoors

## **Q. What should I do if I encounter a coyote?**

Coyotes are usually afraid of humans but if you encounter one while hiking, etc. you should attempt to leave the area calmly (do not run) and make loud noises
