Attention

Honorable Mayor and Members of the City Council

The attached email from Rudy Gonzales, Region Manager, Southern California Edison, was received following the printing and distribution of the Agenda packet.

A copy of the attached was distributed on Wednesday (emailed to the City Council, placed at the front counter for public review, and posted to the City's website), prior to the City Council meeting, and copies will be placed in the Council foyer and at the dais for Council consideration the night of the meeting (Wednesday, September 10, 2008).

Subject: Information on Prop. 7

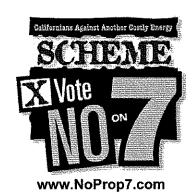

Mr. Mayor and Councilmembers,

I look forward to coming out to tomorrow evening's council meeting to discuss SCE concerns with Prop. 7. I wanted to take the opportunity to clarify that Prop. 7 is an initiative that has qualified for the November ballot. Funding came primarily from Peter Sperling, founder of the University of Phoenix and a resident of Arizona. There is no connection between Prop. 7 and Senate Bill 411. S.B. 411 is a legislative effort that Southern California Edison has participated in to increase the amount of renewable power provided by investor-owned utilities from 20% to 33% by the year 2020. At this point, S.B 411 is stalled and not likely to move forward. However, we do anticipate that new legislation will be introduced next year with a similar goal of 33% by 2020.

Attached you will find documents with specific concerns about Prop. 7. I have also included the latest list of coalition members who have joined the No on 7 campaign. Please call me should you have any questions. Thank you.

(See attached file: No on 7 Local Government.pdf)(See attached file: No on 7 Environmental.pdf)(See attached file: No on 7 Education.pdf)(See attached file: No on Prop 7 Coalition List 8.29.08.pdf)

NO on Proposition 7

Measure Bad for Local Governments and Their Residents

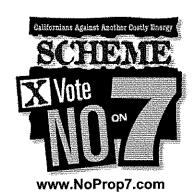

Prop. 7 is opposed by the League of California Cities, the California Municipal Utilities Association, California Special Districts Association and many other diverse organizations because it strips local governments of some of their land use authority and control of their energy resource mix, and will lead to higher electricity costs. Prop. 7 is also opposed by renewable power companies and environmental organizations who warn the measure is "fatally flawed" and will actually "slam the brakes" on renewable energy development in California. Prop. 7 was placed on the November ballot by an Arizona billionaire with no expertise in renewable power issues. Local governments oppose Prop. 7 because it will:

- Usurp local land use authority. Prop. 7 strips local governments of certain land-use authority relating to power plant siting and approval and hands it to the California Energy Commission (CEC). Additionally, Prop. 7 authorizes the state to cut down the time to 100 days in which local governments can file comments with the CEC on certain proposed power plant projects in their communities. Without sufficient time to submit comments, cities and counties could be forced to move forward with a project that doesn't coincide with their general plan. And since the CEC has exclusive jurisdiction over the siting of certain plants anyway, it's unclear whether they will have to consider local comments at all.
- Eliminate local control over the best resource mix. Publicly owned municipal utilities will be subjected to the renewable targets under this initiative, curtailing local control over the best resource mix for a municipal utility's customers. Municipal utilities currently evaluate renewable resources and how to best balance them with rates, reliability and financial resources.
- Lead to higher electric bills for local governments. Prop. 7 allows renewable power providers to always charge 10% above the market price of power, stifling competition for renewable power and artificially increasing the cost. The cost of energy is one of the largest expenses for local governments. Economists estimate that by 2025, when the initiative is fully implemented, Prop. 7 will increase electricity costs for state and local governments by \$874 million annually and lead to a loss of revenue for local governments of \$216.4 million annually. Furthermore, the non-partisan Legislative Analyst cautions that, "...the prospects for higher electricity rates are more likely in the short term..." and the initiative might "...also lead to higher long-run electricity rates." In addition, nothing in the text of Prop. 7 limits increases in electric bills to 3% like proponents claim. Even the Legislative Analyst warns that "the measure includes no specific provisions to implement or enforce this declaration."
- Force small wind and solar companies out of the market. Prop. 7 contains a "competition elimination" provision that forces smaller renewable energy companies out of California's market. It excludes power from renewable plants smaller than 30 megawatts from counting toward the new requirements. Today, nearly 60% of contracts under California's renewable requirements are with these small providers. That's why the California Solar Energy Industries Association warns: "Proposition 7 would devastate California's small solar businesses by forcing us out of the market eliminating a major source of clean power and thousands of jobs."

California Needs More Renewable Energy, NOT Higher Bills & Another Energy Crisis.

California leads the nation with tough, clean energy standards that require utilities to use significantly more renewable power. Prop. 7 will jeopardize this progress and disrupt renewable power development. What's worse, if passed by voters, no changes can be made to this law without another vote of the people or 2/3 of the legislature. Further, Prop. 7 creates new market conditions ripe for manipulation, much like those that caused the last energy crisis. Electricity consumers are still paying almost \$1 billion each year – nearly \$100 for every electricity customer – to pay off the last energy crisis. The last thing we need is a poorly written measure that will lead to higher electric bills and possibly even another energy crisis.

Paid for by Californians Against Another Costly Energy Scheme - No on 7, major funding from PG&E Corporation and Southern California Edison Company, a coalition of environmentalists, renewable energy companies, taxpayers, and labor Phone 866-811-9255 Fax 866-811-9258 www.NoProp7.com

NO on Proposition 7

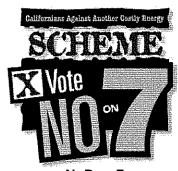

Measure Opposed by Key Environmental and Renewable Energy Providers in the State

An unprecedented coalition of solar, wind and renewable energy companies and environmental organizations all oppose Proposition 7 and warn the measure is so poorly drafted it will slam the brakes on renewable energy development in California. Prop. 7:

- Forces small wind and solar companies out of the market. Prop. 7 contains a "competition elimination" provision that forces smaller renewable energy companies out of California's market. It excludes power from renewable plants smaller than 30 megawatts from counting toward the new requirements. Today, nearly 60% of contracts under California's renewable requirements are with these small providers. The California Solar Energy Industries Association warns: "Proposition 7 would devastate California's small solar businesses by forcing us out of the market eliminating a major source of clean power and thousands of jobs."
- Does nothing to address current barriers to renewable energy and instead creates new roadblocks that will stall renewable energy development. Prop. 7 locks into law many flaws that are currently stifling renewable power development in California and creates new roadblocks to renewable development. For example, the California Public Utilities Commission (CPUC) and the California Energy Commission (CEC) have identified transmission line development to be one of the greatest barriers to more renewable energy and this initiative does nothing to address this challenge. Instead, Prop. 7 would make matters worse by shifting a number of key responsibilities from the CPUC to the CEC, including transmission line approval, adding to more bureaucracy and delays.
- Significantly reduces public input and comment on power plant and transmission line approvals. Prop. 7 authorizes the state to cut down the time to 100 days in which local, regional and state agencies can file comments on certain proposed power plant projects. This would severely limit public participation and feedback from the scientific community, the public and local governments. And by giving the CEC exclusive jurisdiction over the siting of certain plants, it's unclear whether they will have to consider local comments at all. Also, Prop. 7 strips local governments of certain land-use authority relating to power plant siting and approval and hands it to the California Energy Commission (CEC).

California Needs To Maintain Leadership in Renewable Energy, Not Start Taking Steps Backward Under Prop. 7.

California is one of the top in the nation with tough, clean energy standards that require utilities to use significantly more renewable power. Prop. 7 will jeopardize our leadership position, hinder progress and disrupt renewable power development. What's worse, if passed by voters, no changes can be made to this law without another vote of the people or 2/3 of the legislature. In order to move to more clean sources of energy in the state we need to implement sound policy that encourages more renewable development, not less as Prop. 7 clearly will.

NO on Proposition 7 Measure Bad for our Public Schools

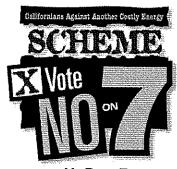

www.NoProp7.com

Proposition 7 is opposed by a diverse coalition of solar, wind and renewable energy companies, consumer, taxpayer, senior, labor, small businesses, local governments and environmental organizations because it is fatally flawed, will slam the brakes on renewable energy development in California and lead to a significant increase in electric bills. Higher electric rates are of particular concern for California's K-12 public schools, UC, CSU, and Community Colleges who are large consumers of power. Prop. 7 was placed on the November ballot by an Arizona billionaire with no expertise in renewable power issues. The education community opposes Prop. 7 because it will:

- Increase electricity costs for K-12 schools and UC, CSU and Community Colleges. Prop. 7 allows renewable power providers to always charge 10% above the market price of power, stifling competition for renewable power and artificially increasing the cost. The cost of energy is one of the largest expenses for schools and Prop. 7 will significantly increase electricity costs, making less money available for investment in teachers, books and technology. Economists estimate that by 2025, Prop. 7 will increase electric bills for K-12 school districts by \$233.3 million annually, and by \$126 million annually for higher education facilities. The non-partisan Legislative Analyst cautions that, "...the prospects for higher electricity rates are more likely in the short term..." and the initiative might "...also lead to higher long-run electricity rates." And, contrary to proponents' false claims, nothing in the text of Prop. 7 limits increases in electric bills. The Legislative Analyst states unequivocally that "the measure includes no specific provisions to implement or enforce this declaration."
- Drain state revenues and, as a result, reduce revenues available for K-12 public schools. Economists predict that Prop. 7's higher electric rates will lead to reduced economic output and tax revenues which, in turn, will reduce state revenues to the tune of \$285.6 million annually by the year 2025. Since as much as 40% or more of state general fund revenues go to K-12 schools, this means public schools could lose tens of millions of dollars each year due to Prop. 7's negative impacts on our economy and state revenues.
- Slam the brakes on renewable energy development. Environmental leaders warn Prop. 7 will not achieve its goals and, instead, will actually lead to less, not more, renewable power. That's because Prop. 7 locks into law many flaws that are currently stifling renewable power development and creates new roadblocks to renewable development. For instance, Prop. 7 contains a "competition elimination" provision that forces smaller renewable energy companies out of California's market. It excludes power from renewable plants smaller than 30 megawatts from counting toward the new requirements. Today, nearly 60% of contracts under California's renewable requirements are with these small providers.

California Needs More Renewable Energy, NOT Higher Bills & Another Energy Crisis. California leads the nation with tough, clean energy standards that require utilities to use significantly more renewable power. Prop. 7 will jeopardize this progress and disrupt renewable power development. What's worse, if passed by voters, no changes can be made to this law without another vote of the people or 2/3 of the legislature. Further, Prop. 7 creates new market conditions ripe for manipulation, much like those that caused the last energy crisis. Electricity consumers are still paying almost \$1 billion each year – nearly \$100 for every electricity customer – to pay off the last energy crisis. The last thing we need is a poorly written measure that will lead to higher electric bills and possibly even another energy crisis.
