

**Pollution Prevention**

These guidelines apply even if the cleaning products are labeled “nontoxic” or “biodegradable”. Although these products may be less harmful to the environment, they can still have harmful effects if they enter into storm drain untreated.

**Be kind to our home, our children are counting on us**

# Dispose of Wastewater Properly

Wastewater from cleaning equipment must be discharged into a sink, toilet, or other drain connected to the sanitary sewer system within sanitary sewer discharge limits, hauled off and disposed of properly, or may be discharged to a previous area, for example a lawn area, as long as it does not overflow into the street, gutter, parking lot or storm drain. Wastewater should never be discharged into a street, gutter, parking lot or storm drain.

**Dispose of chemicals properly, its good for everyone**

## Filter Wastewater

Carpet cleaning wastewater should be filtered before discharging it to the sanitary sewer since fibers and other debris

**Do not dump into the storm drain system**

in the wastewater can clog pipes. The filtered material can be disposed of in the garbage, provided that the waste is not contaminated with hazardous pollutants

## Protect "Our Waterways"

Toxic chemicals and discharged waste water from carpet, drapery, furniture and window cleaning often make their way into the storm drain system and do not get treated before reaching our streams through out the city. This pollutes our local waterways, making them unsafe fore people and wildlife. Following the best management practices will prevent pollution, comply with regulations and protect public health.

**DO  
YOUR  
PART  
TO  
STOP  
POLLUTION,  
IT  
DOES  
MATTER!!!**
